

## LP PYRA 02 - LP PYRA 03 - LP PYRA 12 <br> PYRANOMETERS

Delta Ohm manufactures First Class LP PYRA 02 and LP PYRA 12 and Second Class LP PYRA 03 pyranometers which fully comply with ISO 9060 standards, and meet the requirements defined by the World Meteorological Organization (WMO). These are strong and reliable instruments, especially designed to be used under all weather conditions. They are suitable for installation on the field.

Recommended use: atmospheric research, weather stations, climatology, energy saving research, productive efficiency test of photovoltaic plants, etc...

LP PYRA 02

Pyranometers LP PYRA 02 and LP PYRA 03 are well suited for the measurement of incoming global solar radiation ( $0.3 \mu \mathrm{~m} . . .3 \mu \mathrm{~m}$ spectral range). LP PYRA 12 shadow ring is designed to shield the instrument sensor from direct radiation; by that, an exact measurement of the diffuse sky radiation is possible.
LP PYRA Ox with direct, unamplified output, no external power supply required
LP PYRA 0x AC with $4 . .20 \mathrm{~mA}$ current output- 2-wire connection, requires external power supply
LP PYRA 0x AV with $0 . .1 \mathrm{Vdc}, 0 . .5 \mathrm{Vdc}$ or $0 . .10 \mathrm{Vdc}$ voltage output, requires external power supply
LP PYRA 0x S with serial RS485 and MODBUS-RTU protocol, requires external power supply
The pyranometers with unamplified output have a typical sensitivity of:
$10 \frac{\mathrm{mV}}{\mathrm{kW} \cdot \mathrm{m}^{-2}}$
Every pyranometer is calibrated separately and is supplied standard with a WRR (World Radiometric Reference) Report of Calibration.
